PROFESSIONAL SUMMARY

Senior Business Intelligence Analyst focused on making data reliable, scalable, and impossible to ignore. I bring together strong data modeling, warehousing, pipeline optimization, and visualization skills to transform messy business data into clear insights and decision-ready reporting. Experienced across SQL, Python, dbt, Airflow, Snowflake, and Redshift, with a track record of building analytics solutions that improve how teams measure performance and act on data.

TECHNICAL STRENGTHS

Programming Languages	SQL, Python
Data Warehouses and Databases	Redshift, Snowflake, MySQL
Tools	dbt, Airflow, Git (GitHub), Fivetran
Visualization Tools	Tableau, Sigma Computing

EXPERIENCE

Horizon Next <i>Senior Business Intelligence Analyst</i>	May 2024 - Present New York, NY
--	------------------------------------

- Built the data foundation behind reporting for \$100M+ in annual paid media spend across 5+ clients, using dbt, Airflow, Redshift, and Snowflake to turn fragmented media data into trusted campaign performance, KPI, and client-facing analytics.
- Optimized complex dimensional data models and query performance in Redshift and Snowflake, reducing execution time from hours to minutes and improving reliability for analytics, BI reporting, and downstream ML models.
- Implemented an automated data quality process with dbt and Airflow, significantly improving data integrity and increasing client trust in data, resulting in significant reduction in data-related problems and saving hours of data QA every week.
- Served as the analytics bridge between Media Investment, Strategy, and technical teams, translating ambiguous campaign questions into standardized KPI definitions, attribution logic, and reporting requirements.
- Built customer-facing Tableau dashboards for enterprise clients, enabling self-service analytics across business units and surfacing actionable insights that guided business strategy.

KOALA <i>Analytics Engineer</i>	February 2023 - May 2024 New York, NY
---	--

- Transformed hectic MySQL and Excel financial and marketing reporting into a governed Snowflake single source of truth by re-building core data infrastructure with dbt and Fivetran, adding validation checks, and delivering BI-ready datasets for data analysis, recurring finance, operations, and marketing reporting.
- Implemented Twilio Segment as the centralized customer data layer, unifying cross-channel behavioral data for marketing attribution, customer segmentation, lifecycle analysis, and customer service use cases.
- Designed scalable dimensional models in Snowflake with dbt, while adding testing, documentation, and data quality controls to increase stakeholder confidence in reporting.
- Delivered self-service analytics and recurring business reporting in Sigma Computing, Looker Studio, and Plotly, enabling teams to track KPIs, investigate trends, and reduce dependency on ad hoc data requests.

KOALA <i>Data Analyst Intern</i>	September 2022 - December 2022 New York, NY
--	--

- Analyzed customer behavioral data using Python (pandas, numpy, scikit-learn) and time series forecasting models to identify trends and support strategic planning.
- Extracted and transformed data using SQL to generate weekly analytical reports for management, streamlining the reporting process.

EDUCATION

CUNY Baruch College <i>Bachelor of Arts in Statistics</i>	August 2018 - December 2022 New York, NY
